Resume Matcher: Eisenhower Matrix

The "Do" quadrant is the MVP (version 1.0)

	Urgent	Not Urgent
Important	**Do (Your MVP)** • Read the resume from a text file • Read the job posting from a text file • Built-in list of 30–50 common tech skills to check for • Case-insensitive matching ("java" and "Java" both count) • Find skills in the posting that are missing from the resume • Calculate and print a match percentage • Print a clear error message if a file is missing or empty	**Schedule (For V2.0+)** • Application tracker saving company, role, deadline, status, and match score • Synonym handling ("JS" matches "JavaScript") • Custom keyword list loaded from a separate file • Compare one resume against several postings and rank them • Save results to a report file • Group missing skills by category (languages, tools, frameworks)
Not Important	**Delegate (Use a library)** • Read resumes directly from PDF (pdfplumber) • Colored terminal output for missing skills (colorama) • Command-line arguments for file paths (argparse) • Save tracker data in spreadsheet format (csv module) • Match near-misses and typos like "Javscript" (rapidfuzz)	**Delete (Cut it)** • AI-generated suggestions to rewrite resume bullets • Automatic scraping of postings from LinkedIn or Handshake • Graphical or web interface • User accounts and logins • Automatically submitting applications • Email reminders about application deadlines
